DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1. The species are as follows:

Vaccine against HAV, HBV, HCV, HDV, or HEV or other entity; and

The type and nature of the expressed hepatitis or other heterologous antigen (s).

2. Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37

CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Immunological target of vaccine: (claim 1 (hepatitis), claim 2 (type of hepatitis), other pathogens (claim 7), cancer (claim 8), or any other disease (claim 21).

Nature of expressed antigens/heterogeneous proteins: Hepatitis antigen (claim 1), hepatitis surface antigen (claim 3), other antigenic proteins from specifically recited pathogens (claim 7), cancer antigens (claim 8), and adjuvants (claim 18).

The following claim(s) are generic: All claims are generic.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The central inventive concept is the expression of hepatitis antigens in eukaryotic cells and capable of expression and presentation in antigen presenting cells. However, this concept is neither novel nor inventive because both Pugh, et al.(1986) and Gough (1983) prepared bacteriophage that comprise HBV gene products and further comprise an unmodified (native bacteriophage) surface. Claim 1 does not require the gene product to be under the control of a eukaryotic promoter. Thus, the common technical feature of the species is not special under PCT Rule 13.2 and the claims lack unity of invention.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention. For example, Applicant may elect a bacteriophage vaccine directed against HBV (target of vaccine) expressing

HBsAg/HBeAg and INF α / β (Nature of expressed antigen/heterologous proteins) which reads on claim 1-21.

5. The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
